

Diving

In diving applications, it is essential to know the concentration of oxygen in Self Contained Underwater Breathing Apparatus (SCUBA) tanks.

We offer a high performance O₂ sensor optimised to give repeatable results and a fast response time.

Key aspects.

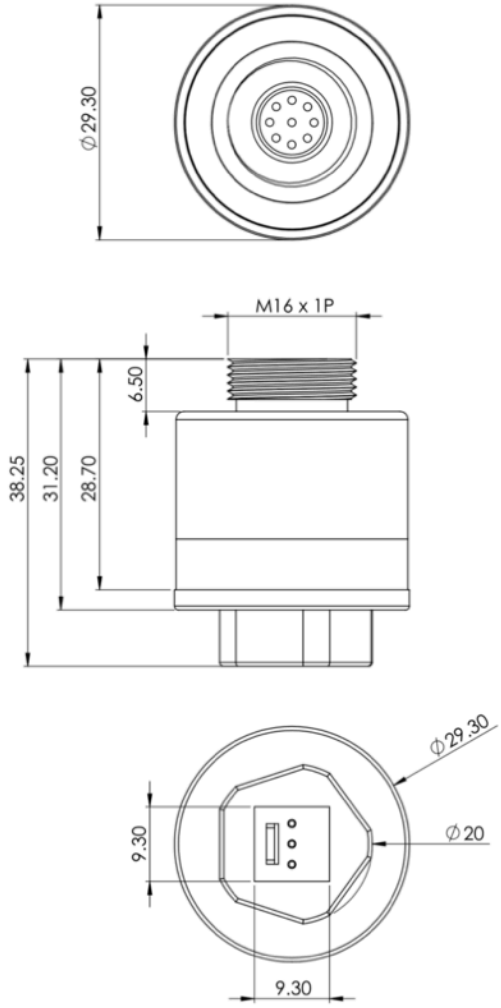

Specifications.

Part Number	2345
Target Gas	Oxygen
Measurement Range / ppm	0 - 100% Oxygen
Output nA / ppm	9-14mV in Air @STP
T90 Response Time	<10 seconds
Warranty*	12 Months

*Warranty subject to DD-Scientific general terms and conditions of sale.

Outline Dimensions.

All dimensions in mm

About DDS.

DDS is a fast growing sensor manufacturer. Founded by Daniel Davies in 2011, we are now producing a potentially life-saving gas sensor every 3 seconds.

Our founding goal was to bring sensors of high quality and consistent performance at competitive prices to the marketplace. We achieve this by investing in new technologies and manufacturing equipment, and designing sensors from the start to be as simple as possible to manufacture whilst not sacrificing performance.

32 BILLION
DDS have successfully delivered more than **32bn** hours of protection for personnel, assets and the environment since **2019**.

QUALITY

Warranty returns tracked at **130ppm**

From Automotive to VOC
DD-Scientific electrochemical gas sensors are used in many different applications around the world.

A potentially life saving sensor made every **SECONDS**

250 YEARS

DDS boast key personnel with over **250+ years** of experience between them in gas sensors and gas detection instrumentation

R&D AND AUTOMATION

We invest heavily in **R&D** and **manufacturing technology** to make sure we are working efficiently and producing high-quality sensors meeting the current and future needs of the gas detection industry.

5 MILLION

Protecting **5 million** residential occupants every year
